

Rolling Fiefdoms ~ by Grégory Heitz

1-6 players
20-30 minutes

Overview

In **Rolling Fiefdoms**, you build a small fief through clever dice pairing and planning. Each turn, you'll roll four dice, pair them to decide **what** and **where**, and gradually fill your fief with cottages, markets, and landmarks. When all plots are filled, score your activated buildings to see whose fief prospers most.

Setup

1. Give each player one **Fiefdom Sheet** and a pen.
2. Take two coloured d6 dice as **Event dice**, where a 6 is a face.
3. Take two other coloured d6 dice as **Wind Rose dice**, where a 6 is a face.
4. Choose a starting **Active Player**. Turns proceed clockwise.
5. On your own sheet, write the name of your fiefdom in the banner.

Turn Structure

Every turn follows three steps:

1. **Roll** all dice.
2. **Split** them into two pairs.
3. **Build** or Forfeit a plot.

After everyone has built, the dice pass to the player on the left, who becomes the new Active Player and starts a new turn.

Solo Variant

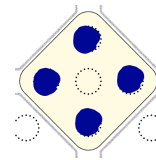

Play with the same rules, alternating between **Active** and **Non-active** turns (Turns track).

- On **Active** turns, roll and pair the dice as usual.
- On **Non-active** turns, roll all four dice:
 - Pair the **two Wind Rose dice** together.
 - Pair the **two Event dice** together.

① ROLL

Roll all four dice.

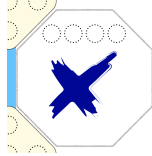

If 2  are rolled (6 on ) , then all dice must be re-rolled.

PESTILENCE

When both  appear (6 on ) , it's a **Pestilence turn**:

1. **Skip Split and Build.**
2. **Forfeit one empty plot** in your fief.

3. The turn ends immediately. **Pass the dice to the player on the left**, who becomes the new Active Player and starts a new turn.

② SPLIT

The Active Player pairs the four dice into two sets (for example, 1,3,4,5 → (1,5) and (3,4)). Everyone uses these same pairs. Each player decides which pair is the **Build Pair** (what to build) and which is the **Location Pair** (where to build).

③ BUILD

Each player acts simultaneously.

Choose one pair to Build, one as Location:

- The **Location Pair** shows where you'll build (e.g. dice 2 and 5 → (2,5) or (5,2)).
- The **Build Pair** decides what you'll build.

 and  rolls (6 faces):

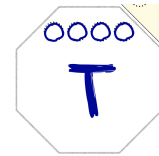

- If one  (6) appears on  , that die may not be used for the Location Pair.
- If one  (6) appears on  , that die must be used for the Location Pair. It is a wild, and each player decides the value to use (between 1 and 5).

Build Options:

- **Sum:** Add both dice. Build a **Basic** (2–5) or **Advanced** (7–10) building. If the sum is 6, you may build a **Springhouse**.
- **Split Action:** Use one die (1–5) to build a Basic building. Fill pips matching the other die's value in an empty adjacent Square as **Population**. If there is no empty population Square, you may still build, but do not add population.

If the Build pair has one  on  , you may still build a Basic building. This is a Split Action without population.

After building in a location, **outline the number of Workers required** at the top of the plot.

Example

The active player rolled 1-3-4-5 and pairs them (1,5) and (3,4). You pick (3,4) as your Build (7 → Townhall) and (1,5) as your Location: draw a Townhall outlining 4 workers required.

If **neither location is empty**, you must **Forfeit** a plot by crossing out any empty plot of your choice.

Population & Housing

When population is gained via **Split Actions**, it is tracked both on your **Population & Housing track** and on the population Squares of your fief.

Population & Housing

Each **Cottage** provides housing for **4 Population** (outline the left-most available unit on the track).

Population & Housing

If your total Population exceeds available Housing, the excess becomes **Vagrants**. For scoring, Vagrants cause a penalty of **-1 VP per Vagrant**.

Example

You have 15 Population and 3 Cottages. Housing = $3 \times 4 = 12 \rightarrow$ Vagrants = $15 - 12 = 3 \rightarrow$ Penalty = -3 VP.

Influence

Covering  on the Population & Housing track grants one **Influence point**. When gained, outline the leftmost Influence point on the Influence track.

During the Build action, use Influence to **increase or decrease by 1 the value of any one die** per Influence point spent. Scribble over each Influence point used.

You cannot use Influence to change a  or  roll.

The change of value of a die using Influence only affects the player using it. The split pairs stay unchanged for all other players.

Example

The active player rolled 1-3-4-5 and pairs them (1,5) and (3,4). Unfortunately, both Location pairs are occupied, so you would have to forfeit an empty plot. You spend 2 Influence points to decrease twice the 3 die to use it as a 1, and now you can build at the location (1,4) that is empty in your fief.

Buildings Reference

Basic Buildings (2–5)

 Building	 Scoring
2 Farm	2 3 VP (+2 if next to a Springhouse)
3 Quarry	2 3 VP (+1 if in the same row/col as another Quarry)
4 Windmill	2 3 VP (+1 if adjacent to another Windmill)
5 Market	3 1 VP per 2 Population <i>pips</i> in each adjacent Square (rounded down)

Special Buildings (1 & 6)

 Building	 Effect / Scoring
1 Cottage	0 When built, outline 1 Housing unit. 2 VP if occupied by at least 1 Population (Population and Housing track)
6 Springhouse	0 When built, remove 1 Worker requirement (min 0) from an adjacent building. -1 VP per adjacent Forfeited plot

Advanced Buildings (7–10)

 Building	 Scoring
7 Townhall Max. 1	4 5 VP + 2 VP per unique activated Basic or Special type in its row or column.
8 University Max. 1	3 5/8/12/15 VP for 1/2/3/4 unique Advanced (built even if inactive)
9 Almshouse Max. 1	2 Cancel up to 12 VP of Vagrant penalty at game end
10 Guild Max. 2	4 Build a unique Guild type (see Guild Types)

Guild Types

Farmers	15 VP for a group of 4 or more connected Farms.
Quarry	15 VP for a group of 4 or more connected Quarries.
Windmillers	15 VP if 4 or more Windmills along the outer edges.
Merchants	15 VP if 4 or more Markets in the Centre.

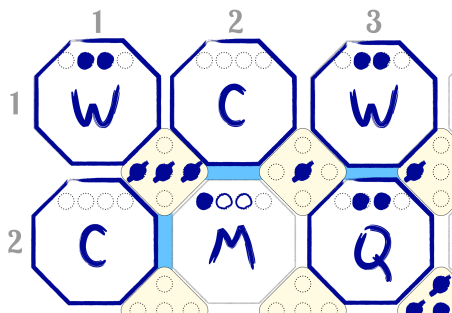

When building a guild, you must immediately decide which guild you are building.

Game End & Scoring

The game ends when **every player's 25 plots are filled**, whether built or forfeited. Everyone then scores simultaneously.

During Scoring:

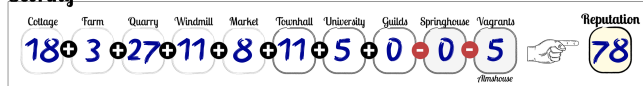

1. **Activate Buildings:** For each building with a Worker Requirement, assign adjacent Population pips to fill Worker requirements and mark each used pip - 1 Population pip can **only** be used for allocating 1 Worker in one adjacent building. When the Worker requirement is met, that building becomes **Activated** by outlining its plot.

2. **Score Buildings:** Activated buildings earn their listed VP and bonuses. Nonactivated ones score nothing themselves, but may still count for bonuses.
3. **Score Cottages:** Each occupied Cottage (outlined Housing unit with at least one filled pip) is worth 2 VP.
4. **Springhouse Penalty:** Lose 1 VP per Forfeited plot adjacent to a Springhouse.
5. **Vagrant Penalty:** Lose 1 VP per Vagrant (activated Almshouse cancels up to -12 VP).

The player with the **most VP wins the game**. In case of a tie, the player with the most population wins.

Scoring

Clarifications

Build

- You may build even if all adjacent population Squares are filled (no new population).
- You may build multiple of the same building type, except those marked **Max. 1** or **Max. 2** per game.
- When both coordinates are unavailable, you must forfeit any empty plot.
- You cannot add population pips to a Square that already has any pips, even if not all 5 pips are filled. Population can only be added to empty Squares.
- When using "Single" or "Split Action" build, you cannot forfeit the building to add population. You cannot add population without adding a building.
- When a **Springhouse** is built, immediately reduce the Requirement of one adjacent building by 1 (min 0).
- You cannot use Influence on more than one die during the Build action.
- Influence cannot decrease a die value below 1 or increase its value above 5.

Scoring

- Basic building scoring bonuses do not require other buildings to be active.
- Buildings with a Worker Requirement of 0 are considered activated.
- **Townhall** counts only **activated Basic or Special Buildings**.
- **University** counts all **built Advanced Buildings**.
- **Guilds** scoring requires that the matching basic buildings be active.
- A **Population square** can be shared by multiple **Markets**.

Playtesting & Thanks

Huge thanks to everyone who playtested and gave feedback.
