

Rolling Fiefdoms

Designed by Grégory Heitz

Overview

In **Rolling Fiefdoms**, you build a small fief through clever dice pairing and planning. Each turn, you'll roll four dice, pair them to decide **what** and **where**, and gradually fill your fief with cottages, markets, and landmarks. When all plots are filled, score your activated buildings to see whose fief prospers most.

Setup

1. Give each player a **Fiefdom Sheet** and a pencil.
2. Take 4 dice: two **Wind Rose d6 dice** (6 is a wind rose face) and two **Event d6 dice** (6 is an X face) - if possible, use a different colour for each set.
3. Choose a starting **Active Player**. Turns proceed clockwise.
4. On your own sheet, write the name of your fiefdom in the banner.

Regions

Each fief is composed of 5 Regions: Forest 🌲 (rows 1 & 2), Mountain ⚙️ (columns 1 & 2), Marsh 🌾 (rows 4 & 5), Sea 🚤 (columns 4 & 5), Centre (9 central plots).

On your own sheet, assign the individual numbers **2-5** to each of the four **Regions**, and do the same with the sums 7-10. Use each number **exactly once**. The **Centre** always uses **1** and **6**.

These section values matter only during **Pestilence** turns.

Tip

First game suggested regions: Forest = 2-7, Sea = 5-10, Mountain = 3-8, Marsh = 4-9.

Turn Structure

Every turn follows three steps:

1. **Roll** all dice.
2. **Split** them into two sets.
3. **Build** or Forfeit a plot.

After everyone acts, the dice pass to the player on the left, who becomes the new Active Player and starts a new turn.

Solo Variant

Play with the same rules, alternating between **Active** and **Non-active** turns.

- On your **Active turns**, roll and pair the dice as usual.
- On **Non-active turns**, roll all four dice:
 - Pair the **two Wind Rose dice** together.
 - Pair the **two Event dice** together.

Play continues until all 25 plots are filled, then score normally.

1. Roll

Roll all four dice.

If 2 wind roses are rolled, then all dice must be re-rolled.

Pestilence

When both Xs appear, it's a **Pestilence turn**:

1. **Skip Pairing and Action.**
2. **Sum the two Wind Rose dice** (result 1-10) - wind rose count as 0.
3. **Forfeit one empty plot** in the matching Region:
 - Sum = **1** or **6** → **Centre**.
 - Sum = **2-5, 7-10** → the fief **Region** whose assigned pair matches that sum.

4. **If the target area has no empty plots, forfeit any one empty plot.**
5. The turn ends immediately. **Pass the dice to the player on the left**, who becomes the new Active Player and starts a new turn.

Example

Your Pestilence Regions are Forest=2-7, Sea=5-10, Mountain=3-8, Marsh=4-9. A Pestilence occurs; Wind Rose dice show 3 and 2 (sum 5) → **Sea** Region. Cross out one empty plot in Sea, then the dice pass to the left.

2. Split

The Active Player pairs the four dice into two sets (for example, 1,3,4,5 → (1,5) and (3,4)). Everyone uses these same pairs. Each player decides which pair is the **Build Pair** (what to build) and which is the **Location Pair** (where to build).

3. Build

Each player acts simultaneously.

Choose one pair to Build, one as Location:

- The **Location Pair** shows where you'll build (e.g. dice 2 and 5 → (2,5) or (5,2)).
- The **Build Pair** decides what you'll build.

X and Wind Rose rolls:

- If one **X** appears, that die may not be used for the Location Pair.
- If one **wind rose** appears, that die must be used for the Location Pair. It is a wild, and each player decides the value to use (between 1 and 5).

Build Options:

- **Sum:** Add both dice. Build a **Basic** (2-5) or **Advanced** (7-10) building. If the sum is 6, you may build a **Springhouse**.
- **Split Action:** Use one die (1-5) to build a Basic building. Fill pips matching the other die's value in an empty adjacent Square as **Population**. If all population Squares are filled, you may still build, but add no population.

- **Single X:** If one X appears, you may still build, but add no population.

After building in a location, **outline the number of Workers required** at the top of the plot.

Example

You roll 1,3,4,5. The active player pairs them (1,5) and (3,4). You pick (1,3) as your Build (4 → Windmill) and (5,4) as your Location (draw a Windmill with 2 workers required).

If both possible locations are blocked, you must **Forfeit** a plot by crossing out any empty plot of your choice.

Population & Housing

When population is gained via **Split Actions**, it is tracked both on your **Population & Housing track** and on the population Squares of your fief.

Population & Housing

Each **Cottage** provides housing for **4 Population** (outline the left-most available unit on the track).

Population & Housing

If your total Population exceeds available Housing, the excess becomes **Vagrants**. For scoring, Vagrants cause a penalty of **-1 VP per Vagrant**.

Example

You have 15 Population and 3 Cottages. Housing = $3 \times 4 = 12 \rightarrow$ Vagrants = $15 - 12 = 3$. You lose 1 VP for each Vagrant → -3 VP total.

Building Reference

Basic Buildings (2-5)

Value	Building	Req	Effect / Scoring
2	Farm	2	3 VP (+2 if next to a Springhouse)
3	Quarry	2	3 VP (+1 if in the same row/col as another Quarry)
4	Windmill	2	3 VP (+1 if adjacent to another Windmill)
5	Market	3	1 VP per Population <i>pip</i> in adjacent spaces

Special Buildings (1 & 6)

Value	Building	Req	Effect / Scoring
1	Cottage	0	When built, outline 1 Housing unit; 2 VP if occupied by at least 1 Population (Population and Housing track)
6	Springhouse	0	When built, remove 1 Worker requirement (min 0) from an adjacent building; -1 VP per adjacent Forfeited plot

Advanced Buildings (7-10)

Value	Building	Req	Effect / Scoring
7	Townhall Max. 1	4	5 VP + 2 VP per unique activated Basic type in its row or column.
8	University Max. 1	3	5/8/12/15 VP for 1/2/3/4 unique Advanced (built even if inactive)
9	Almshouse Max. 1	2	Cancel up to 12 VP of Vagrant penalty at game end
10	Guild Max. 2	4	Build a unique Guild type (see below)

Guild Types

Farmers:	15 VP for a group of 4 or more connected Farms.
Quarry:	15 VP for a group of 4 or more connected Quarries.
Windmillers:	15 VP if 4 or more Windmills along the outer edges.
Merchants:	15 VP if 4 or more Markets in the Centre.

Game End & Scoring

The game ends when **every player's 25 plots are filled**, whether built or forfeited. Everyone then scores simultaneously.

During Scoring:

- Activate Buildings:** For each with a Worker Requirement, assign adjacent Population pips to fill Worker requirements and mark each used pip - 1 Population pip can **only** be used for allocating 1 Worker in one adjacent building. When the Worker requirement is met, that building becomes **Activated** by outlining its plot.

- Score Buildings:** Activated buildings earn their listed VP and bonuses. Nonactivated ones score nothing themselves, but may still count for bonuses.
- Score Cottages:** Each occupied Cottage (outlined Housing unit) = 3 VP.
- Apply Penalties:** Lose 1 VP per Vagrant (activated Almshouse cancels up to -8 VP).

The player with the **most VP wins the game**. In case of a tie, the player with the most population wins.

Scoring

Cottage	Farm	Quarry	Windmill	Market	Townhall	University	Guilds	Springhouse	Vagrants	Almshouse	Reputation
18	3	27	11	8	11	5	0	0	5		78

Clarifications

- You may build even if all adjacent population Squares are filled (no new population).
- When both coordinates are unavailable, you must forfeit any empty plot.
- You cannot add population pips to a Square that has already pips, even if not all 5 pips are filled. Population can only be added to empty Squares.
- Basic building scoring bonuses do not require other buildings to be active.
- Townhall counts only **activated Basic Buildings**.
- University counts all **built Advanced Buildings**.
- When a **Springhouse** is built, immediately reduce the Requirement of one adjacent building by 1 (min 0).
- You may build multiple of the same building type, except those marked (**Max. 1** per game).
- Guilds scoring requires that the matching basic buildings be active.
